

Adarsh Jayaram

adarshjedi@gmail.com | (510) 953-2104 | [linkedin.com/in/adarshjayaram](https://www.linkedin.com/in/adarshjayaram)

Education

Northeastern University, Boston, MA | B.S Computer Science, Business Minor

Graduation: **May 2025**

New York University, NYU, NY | M.S Cybersecurity

Expected Graduation: **May 2027**

College Extracurriculars: Northeastern Electric Racing Club member (Contributed to the club website)

Technical Skills

Languages: Python, TypeScript/JavaScript, Java, C++, MySQL, Kotlin

Platforms: Visual Studio Code, Docker, Shell Scripting, Ubuntu & Red Hat Linux, MongoDB

Frameworks: React, Express, Node.js, Flask

Work Experience

Ghangor Cloud | *Cybersecurity Internship* | August 2023 - December 2023

- Developed and tested features for CAPE, a data privacy platform.
- Independently deployed connectors, crafted custom regex patterns, and set up MySQL databases to rigorously evaluate the CAPE's security and data privacy capabilities.
- Identified and reported security and functionality issues during testing, contributing to platform improvements.
- Extended a Keycloak webhook extension to intercept and modify outgoing event messages before forwarding them to external services.

Delegates Beyond Borders LLC | *Ecommerce Internship* | January 2023 - July 2023

- Assisted online store operations, conducted market research, and analyzed website traffic with Google Analytics.

Projects

Web Crawler (Python | Visual Studio Code | March 2024)

- Programmed the web crawler to automatically login to an HTTPS website using TLS over TCP
- Developed a crawling function to traverse efficiently across tens of thousands of website pages
- Implemented the web crawler using low-level HTTP request handling and custom parsing logic, avoiding automated libraries such as BeautifulSoup or Scrapy

Distributed Key Value Store (Python | Visual Studio Code | April 2024)

- Researched RAFT documentation in order to implement a custom made version of the RAFT consensus algorithm using leader election, log replication, and fault tolerance using UDP protocol.
- Ensured reliability by handling PUT/GET request queues and redirects during leader changes and network delays.

Modified Chess Game with AI (Python | Visual Studio Code | December 2024)

- Created a chess game with the pygame UI. Includes highlights of possible moves when a piece is clicked, lightning strikes for randomness, and an inbuilt AI opponent to challenge the player.
- Produced a mid to high performing AI algorithm with scalable difficulty using heuristics and depth-first search.

Personal Website (HTML + Python | Visual Studio Code | December 2024)

- Developed and deployed a personal website with HTML frontend and Python backend:
<https://adarshjayarampersonalwebsite.onrender.com>
